

Paying for copies is nothing new. But what makes these solutions so special is choice – for the operator and user. The operator can choose between a coin-only, card-only or card & coin solution. And users can choose to pay for copies by card or coin if the operator installs the unique PayMatic Card & Coin solution, a breakthrough in versatility and convenience. PayCon, the card-only device, is particularly useful in corporate environments where cost allocation is the key issue. PayMatic Coin, the simplest solution, is a coin-only device for a pay-for-copy business.

It's the benefits that count

All three devices are sturdy constructions that can be securely attached to a copier and are easy to install (plug & play), easy to use and easy to administer – decisive benefits for operator and user.

Although most of Europe now uses the euro, the two PayMatic devices have no trouble recognising coins from other currencies. Another convenient advantage is that users can easily recharge chip cards for the PayMatic Card & Coin by inserting coins into the device. All three devices have been specially tuned to

Konica Minolta's line-up of monochrome and colour copiers so all the point-of-sale operator has to do is set the charge for individual copies. Corporate controlling departments will find it just as easy to allocate the output from Konica Minolta digital copier-printers to specific departments or users. The benefits to the operator are enormous – billing, registering and controlling copying by card or coin from a single device.

How you benefit

- Tailor-made tariffs for all customers and copy formats
- Sturdy, practical design for heavy everyday use
- Compatible with all European coins

Konica Minolta Card & Coin Accounting

Choice
counts

Gilt-edged solutions in accounting

Sharing copying costs or charging them to specific individuals or groups is a big issue in copying scenarios as varied as the local post office or department store with its off-the-street customers, the library, university or school with its different user groups, and the cost-conscious office environment. Whatever your copying location, you're likely to be looking for accurate, flexible and easy-to-operate accounting solutions. Now Konica Minolta has teamed up with IPC Systems to provide you with three straightforward plug-and-play accounting solutions to ensure you get the IPC accounting device you need for your Konica Minolta copier. In the past accounting solutions were usually confined to monochrome devices. These devices can be just as easily used for Konica Minolta's colour copiers.

Konica Minolta and IPC Systems make a powerful team. The Dutch-based group has a Europe-wide network and decades of experience in coin-operated machines while Konica Minolta runs a pan-European sales, service and support network for its output devices. Together, Konica Minolta and IPC can now offer copy-for-pay and corporate customers all over Europe tailor-made accounting solutions.

→ PayMatic Coin

This straightforward coin-only device is the ideal solution for supermarkets, department stores, libraries, post offices, libraries – in fact any environment where you want to provide a quick and easy copying service for off-the-street customers. The advantages PayMatic offers include:

- Ease of use – self-service
- Sturdy construction
- Secure attachment to output device

→ PayCon Card

This more sophisticated card-only device is primarily designed for corporate environments where cost allocation, cost sharing and access controls the main consideration.

The PayCON is not only a sturdy, secure solution, it also brings a number of other benefits to a business:

- Increased cost consciousness
- Simple accounting procedures
- Different tariffs for monochrome and colour / A4 and A3 output
- Contactless payments (MiFare)

➔ PayMatic Card & Coin

This most versatile and convenient card & coin device is ideal suited to a wide range of environments such as universities, schools, libraries, public institutions, government offices and copy shops. Besides sharing the same sturdy and secure design as the other two solutions, this card & coin device has a number of specific advantages:

- Card, coin or contactless (MiFare) payments
- Card rechargeable at device
- Separate solutions for off-the-street customers (coin) or regulars (card)
- Different internal accounting tariffs possible (e.g. for teachers and pupils or staff and customers, optional)
