# AccurioPro Flux Premium

## Category

Output  
Management

## Characteristics

- Unified print room management
- Print policies and rules
- Product based job processing
- Print queue management

# ESSENTIAL TOOL TO OPTIMISE OUTPUT MANAGEMENT

**AccurioPro Flux Premium provides a central point of control, including workflow automation as well as workload analysis. It is optimised for use in CRDs and in-house printshops of public institutions, universities and corporations, and provides an essential tool to minimise costs and maximise return on investment.**

Using a job-ticket based print workflow, AccurioPro Flux Premium provides customers with a tool for easy and convenient ordering of print products. Print providers can route print jobs via the intranet directly from the source application to the printshops. There they can choose from a wide range of intelligent print functions to administrate all incoming jobs. Powerful Make-Ready functionality is included for professional job editing.

With its functionality related to templates and job tickets, AccurioPro Flux Premium facilitates the automatic setup of devices and inline finishing and helps print providers configure and manage products automatically. Operators only need to do the setup once and make great time savings on repetitive prepress work forever after.

# KEY FEATURES

## General

- **Submission of print jobs via clients:** Users can send print jobs to the print shop via the intranet by using a virtual printer. Jobs can be sent directly from the source application without the need of prior conversion to PDF format.
- **Status tracking:** Users can be automatically informed about the status of their print job via e-mail.
- **Collaboration of multiple operators:** All print jobs are hosted on a central server and can be accessed from multiple operator workstations. Every operator has his/her own account always showing clearly who is working on which job.
- **Data analysis:** Print data can be analysed and custom reports created via the included report assistant. A graphic view of the report can be displayed on the dashboard to provide an up-to-date overview for the operator.

## Print policies and rules

- **Print policies:** User roles can be created for print operators and can be allocated specific access rights. This gives the print provider the control and flexibility of limiting access to certain features.

- **Print rules:** Rules can be created to assign jobs automatically to specific operators thus automating workflows and reducing the required operation steps.
- **Preflight:** External preflight engines can be integrated to repair problematic PDF files automatically and avoid production errors (option).

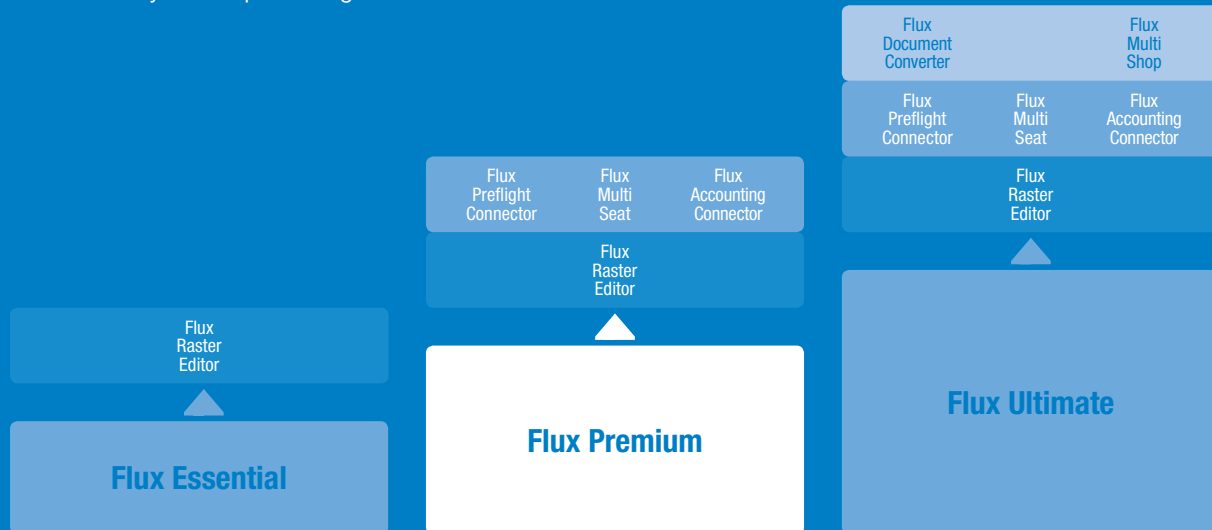

AccurioPro Flux Premium options	
<b>Flux Accounting Connector</b>	Integrates external accounting solutions into the print workflow. Connects AccurioPro Flux Premium to the accounting applications Pcounter (Control System), SafeQ (Ysoft) or PaperCut.
<b>Flux Multi Seat</b>	One Flux Multi Seat license per additional operator is required to enable simultaneous work on the central job list (max. 10).
<b>Flux Preflight Connector</b>	Integrates external preflight engines to fix PDF problems and avoid production errors. Connects to pdfToolbox (Callas) and PitStop (Enfocus).

## Scalability for complete flexibility

As a highly scalable software suite, AccurioPro Flux makes available a range of tools to organise, automate and optimise a company's entire print workflow. The suite comprises three differently featured software versions:

- The entry-level product, AccurioPro Flux Essential, offers essential prepress functions including tools for make-ready and output management.

- In addition to this functionality, the product version AccurioPro Flux Premium also includes automation, reporting and internal job submission.
- Beyond all this, the most comprehensive product version, AccurioPro Flux Ultimate, provides the functionality of a web-to-print online shop.
